

THE MANDATE BENEATH J281843

Turn abundant AI opportunity into a governed portfolio of adopted workflows and measurable value.

The role links problem identification, human-centered design, proof testing, change readiness, scaled implementation, portfolio prioritization, and value capture. The candidate must make the complete operating decision legible.

AI opportunity is abundant. Operating value is selective.

Prioritize at the intersection of workflow friction, evidence readiness, retained human authority, adoption ownership, and measurable value.

PUBLIC CONTEXT

Human at the helm

16,000+ Sidekick users

\$240M+ administrative efficiency savings over three years

CENTRAL OPERATING CONTRADICTION

Highmark must move quickly enough to create meaningful operational and affordability gains while preserving qualified human decisions, privacy, regulatory compliance, member trust, provider trust, and reliable implementation.

FIVE TENSIONS TO MANAGE

Opportunity breadth vs. capacity

Many workflows can plausibly benefit; only a bounded portfolio can receive the evidence, integration, adoption, and leadership attention required.

Proof speed vs. responsible governance

Legal, privacy, business, technical, and human-authority conditions must shape the proof rather than arrive as late-stage approval gates.

Technical feasibility vs. frontline adoption

A model can work while the operating intervention fails. Workflow fit, training, exception design, and ownership determine whether value survives contact with work.

Local improvement vs. enterprise reuse

HPO needs to learn which components, controls, evidence patterns, and change interventions should compound across workflows.

Efficiency pressure vs. trust

Administrative efficiency matters, but the method must protect the experience and authority of members, providers, clinicians, and employees.

Decision standard

Advance only when the problem, evidence, authority, adoption owner, measurement, and scale/stop criteria can be stated in one coherent opportunity charter.

THE OPERATING ARTIFACT

A complete five-condition path before momentum becomes commitment.

01	02	03	04	05
Workflow friction	Evidence + readiness	Human authority	Adoption + ownership	Measurable value

WHAT THE ROLE SHOULD MAKE DECIDABLE

- Which workflow problems deserve AI investment.
- Which opportunities advance, remain bounded assist, hold for readiness, stay human-led, or stop.
- What evidence is required before a proof begins.
- Where qualified human authority must remain explicit.
- Who owns change, training, exception handling, and operating results.
- Which measures demonstrate learning and value without invented ROI.
- Which local patterns are reusable across HPO.
- What should be stopped before more capacity is consumed.

PROOF MAP: WHY MY EVIDENCE TRANSFERS

Vape-Jet Direct AI-first transformation across operations, quality, support, ERP, telemetry, training, and accountable work.	DudeWorth Opportunity assessment and agentic-workflow design spanning value, data readiness, human judgment, governance, evaluation, and adoption.	Amazon Customer-backward mechanisms, throughput visibility, standard work, escalation, and closed-loop learning at 24/7 scale.
Compunetics Technical translation, quality systems, root cause, controls, and execution in high-reliability environments.	ZeusVu Regulated autonomous operations, computer-vision concepts, safety, chain of custody, and governed field execution.	Operating through-line Make complex work visible, align people and systems, install mechanisms, and measure what changes.

IMMEDIATE CONTRIBUTION PROFILE

Cross-domain operating depth is useful when AI work spans workflow, technology, people, governance, and measurement.

I bring a disciplined discovery method, direct AI workflow work, technical-business translation, human-authority design, change execution, and measurable proof discipline—then learn the specific operating context quickly from the people closest to it.

Executive discussion guide

QUESTIONS BEFORE PRESCRIPTIONS

Discover the operating reality, decision rights, and change burden.

MANDATE AND PORTFOLIO

1. Where is HPO experiencing the greatest gap between AI interest and implementation capacity?
2. How are opportunities currently groomed, prioritized, paused, and stopped?
3. Which existing use cases have executive sponsorship but still struggle with workflow ownership or adoption?

AUTHORITY, GOVERNANCE, AND EVIDENCE

1. At what point do Responsible AI, privacy, legal, security, and data-stewardship partners enter the opportunity process?
2. Which decisions create the most debate about human authority, source provenance, or acceptable risk?
3. What evidence must exist for a proof to move into scaled use?

ADOPTION AND VALUE

1. Who owns value realization after a proof moves from the AI team into an operating function?
2. How does HPO measure adoption beyond access or usage?
3. Which workflow frictions repeat across member, provider, claims, utilization, network, appeals, and care-management teams?

FIRST-SIX-MONTH CALIBRATION

1. What would make the first six months unmistakably valuable to the Director of AI and HPO leaders?
2. Which capability should this person strengthen immediately: discovery, proof discipline, implementation, adoption, portfolio management, or value capture?
3. What is the strongest concern about my fit that a 15-minute working discussion could test directly?

WHAT I WOULD LISTEN FOR

Decision friction

Where opportunities wait, repeat, escalate, or consume scarce technical and leadership attention.

Ownership ambiguity

Where sponsorship exists but changed work, exceptions, training, or value realization lack an accountable owner.

Evidence discontinuity

Where current-state baselines, source authority, user feedback, or post-deployment learning are not connected.

BALANCED SCORECARD FOR THE ROLE

- Business outcome and operating behavior
- Member, provider, employee, or clinician experience
- Economics and capacity use
- Quality, risk, trust, and human authority
- Adoption and workflow fit
- Learning speed and reusable capability
