Hiring Team
Artificial Intelligence (AI) Consultant · Health Plan Operations
Highmark Inc.

Highmark is not short of AI possibilities. The harder work is deciding which opportunities deserve investment, creating proof designs that preserve human authority, preparing operating teams for adoption, and making value visible after deployment. That is the contribution I am prepared to bring to J281843.

My conversation about Health Plan Operations reinforced that this is an implementation and operating role, not only a technology role. The job description connects problem identification, human-centered design, proof testing, business readiness, change execution, portfolio grooming, and value capture. My career has repeatedly required the same integration: read complex work quickly, translate across business and technical teams, install operating mechanisms, and move from promising ideas to accountable execution.

01	02	03	04	05
Workflow friction	Evidence readiness	Human authority	Adoption ownership	Measurable value

At Vape-Jet, I lead AI-first operating transformation across production, quality, support, customer success, ERP/Odoo, engineering issue flow, telemetry, training, and standard work. Through DudeWorth, I develop AI-readiness and agentic-workflow frameworks that explicitly connect value, data readiness, governance, human judgment, adoption burden, evaluation, and escalation. At Amazon, I built customer-backward mechanisms in a 24/7 environment supporting approximately five million annual second-day orders. At Compunetics, I translated across engineering, manufacturing, quality, customers, and high-reliability technical programs.

I created an independent candidate vision at <https://russelldudek.github.io/highmark/>. Its AI Value Topology demonstrates the contribution I would bring: a qualitative decision model that traces a workflow opportunity through friction, evidence readiness, retained human authority, adoption ownership, and measurable value before it advances. The site also includes my 90-day entry plan and a printable opportunity charter.

My advantage is the combination of operating depth, direct AI workflow work, technical-business translation, change leadership, quality discipline, and an instinct for making complex systems legible. I would welcome fifteen minutes to pressure-test that contribution against the immediate needs of Health Plan Operations.

A low-risk next step

One sanitized workflow tension. Fifteen minutes. I will show the questions I would use to frame the problem, evidence, human authority, adoption burden, and proof decision.

Thank you for the thoughtful consideration.

Carpe diem,
Russell Dudek
